

Riviera HPC SBATCH Documentation

1 Job Arrays

1.1 Use Cases

Running multiple instances of the same job with different arguments without a need to communicate between jobs.

1.2 Examples

```
1  #!/bin/bash
2  #SBATCH --job-name=array-example
3  ##SBATCH --array=1-5 # Submits a job array with index values between 1 and 5
4  #SBATCH --array=1,3,5,7 # Submits a job array with index values of 1,3,5,7
5  ##SBATCH --array=1-7:2 # Submits a job array with index values between 1 and 7 with steps
   ↪   of 2 (1,3,5,7)
6  ##SBATCH --array=1-5%2 # Submis a job array with index values between 1 and 5 but limits
   ↪   the number of simultaneously running tasks for this job array to 4
7  #SBATCH --partition=short-cpu
8  #SBATCH --output=%A/out_%a.out # The output file will be in a folder with the name jobId
   ↪   and will have the form out_arrayIndex
9  #SBATCH --error=%A/error_%a.err # The error file will be in a folder with the name jobId
   ↪   and will have the form error_arrayIndex
10 #SBATCH --ntasks=1
11 #SBATCH --time=00:05:00
12
13 module load python39
14
15 srun python3 ~/examples/array-example/array-example.py $SLURM_ARRAY_JOB_ID
   ↪   $SLURM_ARRAY_TASK_ID # Calls a python script with the arguments jobId and arrayIndex
```

Listing 1: Job Array SBATCH File Example

2 MPI

2.1 Use Cases

Process based parallelization where the different process can communicate with each other by passing messages. It works on both distributed and shared memory systems.

2.2 Examples

mpi-binary-search.c

```
1  #include <stdio.h>
2  #include <stdlib.h>
3  #include <time.h>
4  #include <mpi.h>
5  #define ARRAY_SIZE 10
6  int binarySearch(int arr[], int key, int begin, int end) {
7      int mid_point = (begin + end) / 2;
8      if(arr[mid_point] == key) return mid_point;
9      else if(abs(begin - end) == 1) return -1;
10     else if(key > arr[mid_point]) return binarySearch(arr, key, mid_point + 1, end);
11     else return binarySearch(arr, key, begin, mid_point - 1);
12     return -1;
13 }
14 void insertionSort(int arr[], int n) {
15     int i, j, key;
16     for(i = 1; i < n; ++i) {
17         key = arr[i];
18         j = i - 1;
19         while(j >= 0 && key < arr[j]) {
20             arr[j + 1] = arr[j];
21             j = j - 1;
22         }
23         arr[j + 1] = key;
24     }
25 }
26 int main(int argc, char** argv) {
27     static int arr[ARRAY_SIZE];
